mario dcunha

Systems thinker with a coding background and a design heart. Builds with craft, leads with calm conviction. Cares about the details, the people, and making complex things feel obvious. Brings warmth, humor, and curiosity to the work—also, pretty fun to work with.

Experience

Product Design, Intuit, QuickBooks
Sep 2019 – present | Mountain View, California

Staff Product Designer (Aug 2024 – present)

Leading design across QuickBooks Lending—loan shopping, decisioning and repeat borrowing. Reframed the experience from isolated product pages to an intent-driven marketplace, using experiment-led design to scale growth. So far: 2x target loan volume, 12% more applications, 66% higher revenue.

Also led the migration of 3M+ contractors into a unified tax experience on QuickBooks Money—zero escalations during tax season, 34% better task completion, and a modular system adopted across every version of QuickBooks.

Senior Product Designer (Feb 2021 – July 2024)

Led the 0→1 design of QuickBooks Money on web—a subscription-free entry point for solopreneurs into a complex ecosystem. Owned product vision, information architecture, and cross-platform cohesion—later extended to further services (above). 65% signup-to-activation, 3x early transactions, 63% of transactions through web alone—still scaling three years later.

Product Designer (Sep 2019 – Jan 2021)

Designed the native iOS onboarding for QuickBooks' first business bank—from a whiteboard to a shipped product in just 3 months—~90% intact after 6 years, 25% higher conversion than web, 60% faster completion. Also designed instant deposit for the same product, capturing ~45% of transactions at launch. Led a couple of growth experiments—both now permanent revenue features.

Product Design Intern, Intuit, ProConnect Tax
May 2018 – Aug 2018 | Plano, Texas

As the sole Design Intern in the Texas office, spent the summer journey-mapping how tax professionals actually navigate between Intuit's accounting and tax products—found the pain points with user-interviews, storyboarded ideal-state experiences, and presented recommendations to the team.

Solutions Architect, Akamai
Mar 2013 – Jun 2017 | Bangalore, India

Performance engineering for retail and travel clients—that built the muscle for translating complexity for different audiences. Analyzed website performance, architected improvements, and helped sales teams tell a story. Mentored new hires and conducted training sessions for global teams.

Systems Engineer, Infosys, Finacle
Nov 2010 – Dec 2012 | Chennai, India

Where it all started. FinTech engineering—building interfaces, writing automation tests, and debugging back-end systems for financial platforms. The coding foundation that still helps shape systems thinking today.

Traits and Skills

Resilient	Systems-thinking
Composed	End-to-end ownership
Approachable	Experiment-led design
Meticulous	Information architecture
Storyteller	Visual-thinking
Craft-driven	Operational clarity
Self-driven	Coding background
Opinion-led	Cross-team influence
Adaptable	Mentorship

Achievements

ADPList100 Most Influential Mentors, 2024—52% repeat mentees, 63% of which returned more than three times.

Second runner-up, National PILOT Innovation Challenge 2019, for *Zagrut*, a media-bias news reader app concept, winning $20,000 among 100+ projects across USA.

Top three finalists, Akamai India *Intrapreneurship* Idea Summit, 2016.

Education

M.F.A. Design and Technology
Aug 2017 – May 2019

Parsons School of Design, NYC.

Tutored UX Design and Data Visualization students in creative coding with JavaScript, as a teaching assistant.

Improved online courses for students and faculty as an instructional design assistant.

B.E. Computer Science and Engineering
Aug 2006 – Jun 2010

NMAM Institute of Technology,
Nitte, Karnataka, India

Foundation in software engineering, programming languages, code flow, algorithms, and systems architecture.
